

ORCO BLOCK & HARDSCAPE

ENVIRONMENTAL PRODUCT DECLARATION

Product: Medium Weight • Stanton Plant

This Environmental Product Declaration (EPD) reports the impacts for 1 m³ of concrete formed into manufactured concrete and masonry products meeting the following specifications:

- ASTM C90, Concrete Masonry Unit, Load-Bearing

PRODUCT DESCRIPTION

Medium Weight:

A CMU with both normal weight and lightweight aggregates. Configurations for site walls, architectural masonry with structural and veneer applications. Minimum compressive strength: 2000 PSI. Dimensional properties as defined in ASTM C90.

ENVIRONMENTAL IMPACTS

Declared Product:

Product: MW • Stanton Plant
Density Factor: 1954 kg / m³
Compressive strength: 2800 PSI

Declared Unit: 1 m³ of concrete formed into manufactured concrete masonry product

Global Warming Potential * (kg CO ₂ -eq)	201
Acidification Potential (kg SO ₂ -eq)	0.83
Eutrophication Potential (kg N-eq)	0.35
Smog Creation Potential (kg O ₃ -eq)	18.6
Ozone Depletion Potential (kg CFC-11-eq)	5.37E-6
Carbon Sequestration (kg CO ₂ -eq)	-21

Material Composition: Aggregate (natural), Cinder, Type 1L Cement, Batch water

Additional detail and impacts are reported on page five of this EPD
* Natural carbon sequestration within 28 days of manufacture (which is considered as part of the A3 module for CMU production) are included in the Global Warming Potential (GWP) calculation

PROGRAM OPERATOR

ASTM International
100 Barr Harbor Drive
West Conshohocken, PA 19428

DATE OF ISSUE

03/05/2026 (valid for 5 years until 03/05/2031)

ORCO BLOCK & HARDSCAPE

ENVIRONMENTAL PRODUCT DECLARATION

Product: Medium Weight • Stanton Plant

General Program Instructions	ASTM Program Operator for Product Category Rules (PCRs) and Environmental Product Declarations (EPDs), General Program Instructions. Version 8.0, revised April 29, 2020.
Reference PCR	Part B: Concrete Masonry and Segmental Concrete Paving Product EPD Requirements, March 1 2022. V1.1
The sub-category PCR review was conducted by:	Jack Geibig, Ecoform, LLC, Terrie Boguski, Harmony Environmental, LLC, Christine Subasic, P.E., LEED AP, Consulting Architectural Engineer
Product RSL	n/a
Markets of Applicability	North America
EPD Type	Product Specific
Declared Unit	One cubic meter (m3) of concrete formed into manufactured concrete products
Dataset Variability	n/a
EPD Scope	Cradle to Gate
Year(s) of Reported Manufacturer Primary Data	-
LCA Software	CarbonCLARITY Suite, Concrete Block EPD Generator ■ Verification
LCI Database(s)	Ecoinvent, USLCI, US-EI
LCIA Methodology	TRACI 2.1 v1.04
This declaration was independently verified in accordance with ISO 14025:2006. The UL Environment "Part A: Calculation Rules for the Life Cycle Assessment and Requirements on the Project Report," v3.2 (December 2018), in conformance with ISO 21930:2017, serves as the core PCR, with additional considerations from the USGBC/UL environment Part A Enhancement (2017). ☐ internal ☒ external	Thomas P. Gloria (t.gloria@industrial-ecology.com) Industrial Ecology Consultants
This life cycle assessment was conducted in accordance with ISO 14044 and the reference PCR by:	Climate Earth (support@climateearth.com)
This life cycle assessment was independently verified in accordance with ISO 14044 and the reference PCR by:	Thomas P. Gloria (t.gloria@industrial-ecology.com) Industrial Ecology Consultants

Limitations

Environmental declarations from different programs (ISO 14025) may not be comparable. EPDs are comparable only if they use the same PCR (or sub-category PCR where applicable), include all relevant information modules and are based on equivalent scenarios with respect to the context of construction works. This PCR allows EPD comparability only when the same functional requirements between products are ensured and the requirements of ISO 21930:2017 §5.5 are met. However, variations and deviations are possible. Example of variations: different LCA software and background LCI datasets may lead to different results for the life cycle stages declared.

LIFE CYCLE ASSESSMENT

SYSTEM BOUNDARY

This EPD is a cradle-to-gate EPD covering the product stages (A1-A3) only

PRODUCTION Stage (Mandatory)			CONSTRUCTION Stage		USE Stage					END-OF-LIFE Stage			
Extraction and upstream production	Transport to factory	Manufacturing	Transport to site	Installation	Use	Maintenance	Repair	Replacement	Refurbishment	De-construction/ Demolition	Transport to waste processing or disposal	Waste processing	Disposal of waste
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	C1	C2	C3	C4
X	X	X	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND

Note: MND = module not declared; x = module included.

The production stages and primary unit processes included in the study by product stage are:

Relevant Information for product stages not included in system boundary (A4-C4):

Other products not included in assessment needed for the product to serve intended function in the construction work can include mortar, grout, and reinforcement for concrete masonry product;

Product packaging waste per declared unit include: 6.1 kg pallet waste, 0.06 kg stretch wrap waste, 0 kg foam waste, 0.04 kg paper waste;

Typical end of life treatment is unknown but can include landfill or crushing and then re-use as a recycled aggregate or as road base; The reference service life for concrete masonry is 75 years and for segmental concrete paving is 50 years.

ORCO BLOCK & HARDSCAPE

ENVIRONMENTAL PRODUCT DECLARATION

Product: Medium Weight • Stanton Plant

CUT-OFF

Items excluded from system boundary include: production, manufacture, and construction of manufacturing capital goods and infrastructure; production and manufacture of production equipment, delivery vehicles, and laboratory equipment; personnel-related activities (travel, furniture, and office supplies); and energy and water use related to company management and sales activities that may be located either within the factory site or at another location. No known flows were deliberately excluded from this EPD.

ALLOCATION PROCEDURE

Allocation follows the requirements and guidance Part A: Life Cycle Assessment Calculation Rules and Report Requirements, section 3.3.

The product category rules for this EPD recognize fly ash, silica fume and slag as recovered materials and thus the environmental impacts allocated to these materials are limited to the treatment and transportation required to use as a concrete material input.

PRIMARY SOURCES OF LCI DATA

- Aggregate (natural): US-EI (2020): "Gravel, round, at mine/US", 2001
- Block Cement: Supplier specific primary data, 2024
- Cleaning Chemicals: Ecoinvent 3.4: 50% Citric acid and 50% Phosphoric acid, industrial grade, without water, in 70% solution state, market for/GLO, 2017
- Diesel: USLCI (2015): "Diesel, combusted in industrial equipment/NREL/US", 2007
- Electricity (WECC): Ecoinvent 3.4: "Electricity, medium voltage, market for, cut-off", 2015
- Electricity on-site solar
- Municipal Water: US-EI (2020): "Tap water, at user/US", 2000
- Natural gas: USLCI (2015): "Natural gas, combusted in industrial boiler/NREL/US", 2007
- Non-Hazardous Solid Waste: US-EI (2016): Disposal, municipal solid waste, 2008
- Oils, Lubricants and Greases: Ecoinvent 3.5: Lubricating oil, GLO, market for, cut-off, 2011
- Propane: USLCI (2015): "Liquefied petroleum gas, at refinery/NREL/US, 2007
- Pumice: US-EI (2020): "Pumice, at mine/US, 2010
- Sand: US-EI (2020): "Sand, at mine/US, 2010
- Truck transport: USLCI (2015): "Transport, combination truck, long-haul, diesel powered/tkm/RNA", 2010
- Truck transport: USLCI (2015): "Transport, combination truck, short-haul, diesel powered/tkm/RNA", 2010

INTERPRETATION

The material extraction (A1) product stage dominates most of the potential environmental impacts with cement contributing the greatest percentage of impacts in this stage. This EPD was calculated using manufacturer specific cement data that represents 100% of the total cement used in this mix.

Life cycle impact assessment (LCIA) results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins or risks (ISO 14044, ISO 14040). EPDs are comparable only if they comply with ISO 21930 (2017), use the same, sub-category PCR where applicable, include all relevant information modules and are based on equivalent scenarios with respect to the context of construction works.

DECLARATION OF ENVIRONMENTAL INDICATORS DERIVED FROM LCA

Impact Assessment	Unit	A1	A2	A3	Total
Global warming potential**	kg CO ₂ -eq	1.62E+02	3.01E+01	9.55E+00	2.01E+02
Ozone depletion potential	kg CFC-11-eq	3.27E-06	1.27E-09	2.09E-06	5.37E-06
Eutrophication potential	kg N-eq	1.66E-01	2.19E-02	1.64E-01	3.51E-01
Acidification potential	kg SO ₂ -eq	3.2E-01	3.65E-01	1.47E-01	8.31E-01
Photochemical ozone creation potential	kg O ₃ -eq	6.57E+00	9.28E+00	2.78E+00	1.86E+01

Resource Use

Abiotic depletion potential for non-fossil mineral resources (ADPelements)*	kg Sb eq	2.57E-05	-	4.52E-06	3.03E-05
Abiotic depletion potential for fossil resources (ADPfossil)	MJ	7.4E+02	4.31E+02	4.21E+02	1.59E+03

Additional Inventory Parameters for Transparency

Emissions from calcination and uptake from carbonation	kg CO ₂ -eq	0E+00	0E+00	0E+00	0E+00
--	------------------------	-------	-------	-------	-------

Carbonation Carbon Removals

Carbon Sequestration**	kg CO ₂ -eq			-21	-21
------------------------	------------------------	--	--	-----	-----

* Emerging LCA impact categories and inventory items are still under development and can have high levels of uncertainty that preclude international acceptance pending further development. Use caution when interpreting data in these categories.
- Not all LCA datasets for upstream materials include these impact categories and thus results may be incomplete. Use caution when interpreting data in these categories
No substances required to be reported as hazardous are associated with the production of this product.
** Natural carbon sequestration within 28 days of manufacture (which is considered as part of the A3 module for CMU production) are included in the Global Warming Potential (GWP) calculation.
